

PROGETTO MARMO

Tundra Grey Marble Characteristics Guide

Marble basins are a luxurious and elegant design choice for bathrooms. Made from natural stone, marble adds a touch of sophistication and individuality to a bathroom. It is also a durable and long-lasting material that can withstand daily use.

Will my marble basin be exactly like the image?

No, but for a good reason. Each basin will have unique variations, created as the marble is formed over millions of years through a process of heat and pressure. During this process various minerals and other materials become incorporated into the stone. The patterns make each piece of marble unique and do not affect the quality of the stone.

What variations may occur?

Marble is prized for its unique variations including colour, veining and patterns which give each piece its own distinct character.

Colour variations are due to differences in mineral content and formation conditions such as pressure and heat.

Veins are formed by the movement of fluids or gases, which can leave mineral deposits, creating bands of colour.

Patterns in marble are caused by the presence of fossils, rocks and shells when the marble was formed. The recrystallization of the original rock can also form patterns.

Can I buy 2 identical basins?

While no two basins will be identical, it is possible to choose two similar or complementary basins. We recommend you visit a showroom or contact Plumblin's customer service team if you are seeking two similar basins.
