**⚠ Important!** Before installing, ensure there is sufficient timber framing in the wall to securely fasten your basin to.

## Reccomended SpaceMate Waste Trap

For ease of install we reccomend installing this basin with this SpaceMate Trap.

SpaceMate Basin/Vanity Trap 32mm

Code: LT32.40

# Installation Instructions Lavamani 45 Round Wall Basin (Code - WL1)

**WL1 Recommended waste outlet and water inlet positions when installed with a SpaceMate Trap**

**IMPORTANT:** Please note this is the **back view**

1. Once the water inlets and waste outlet have been positioned and the wall has been lined, fasten the fixing bracket in place ensuring it is level.

2. Install basin mixer on the basin, checking there is enough length on the flexi hoses.

Install the trap onto the waste pipe in the wall, and fit the bottom half of the top fix waste to the trap.

Measure and adjust the trap to match the basin waste hole setout.

Attach the basin mixer hoses, then lift the basin assembly over the waste setup, tilting to avoid the installed basin bracket, then slide basin down onto the wall bracket ensuring the waste aligns with the waste hole.

To avoid damages we recommend two installers for this step.

3. Once the basin is sitting on the bracket ensure it is sitting level.

4. Fasten the top fix bolt on the waste and apply a bead of silicone around the back edge of the basin.

## Installation Instructions Lavamani 45 Rectangular Wall Basin ) (Code - WL2)

We recommend the SpaceMate waste trap however it is not required for this basin as there is more space and an open void.

IMPORTANT: Please note this is the **back view**

1. Once the water inlets and waste outlet have been positioned and the wall has been lined, fasten the fixing bracket in place.

2. Place the basin back against the wall and slide it down onto the fixing piece ensuring the waste trap aligns with the waste hole.

3. Once the basin is sitting on the  
bucket ensure it is sitting level.

4. Finally fit the basin off with the chosen tapware and  
waste, then apply a bead of silicone around the back  
edge of the basin.
