

# INSTALLATION INSTRUCTIONS

## CARE & MAINTENANCE

progetto

OASIS VESSEL BASINS | OA37 | OA40 | OA55

### Oasis Basin Collection

A curated palette of eight colours infuse the Plumblin Oasis Basins with their distinctive style. Meticulously designed for Aotearoa New Zealand, these coloured basins feature a matt finish. In your bathroom their allure is unmistakable. While these basins are durable and robust, like all bathroomware it is still important they are cared for and maintained in order to keep them looking new for years to come.

### Pre-installation

Prior to installing the basin, inspect it closely to ensure it has not been damaged in transport. Avoid leaving tools in the basin during the installation process.

### Cleaning

For general day-to-day cleaning of the basin, we recommend applying warm soapy water with a microfibre cloth, this will help prevent calcium build up and limescale.

To remove harsh marking such as limescale and calcium build up, CLR, white vinegar, bleach or turpentine can be used remove this. Avoid using acetone and highly acidic or citrus based products.

**Note** - Do not allow water temperature to exceed 55°C.

**Repair Kits** - When damaged, repair kits are available on request.

### The below voids warranty:

- Damage caused by accident, misuse, alterations, modifications, improper handling, or abuse.
- Installation, care, maintenance, and cleaning not in accordance with suggested procedures or guidelines.

## IMPORTANT!

Please read these instructions **prior** to installation

1 - Dry-fit the basin prior to applying silicone to ensure the waste hole aligns with the waste trap.

2 - Ensure the vanity top is dry, then apply a small bead of silicone on the underside of the basin, and place it in the desired position.

3 - Connect up the waste and test for any leaks.

4 - Apply a bead of silicone around the bottom edge to seal between the vanity top and basin.
